Term Test C Exercises and Instructions

There will be four questions on term test C. For the first question, you will be asked to identify the features of two conic sections. The second question is a trigonometric equation, an exponential equation, and a logarithmic equation. For the third question, you will be asked to simplify an expression, for which you may want to use factoring. The fourth question will be two word problems, one for solving triangles and one for logarithms and exponents.

1. Identify the required features of the following conic sections (parabola: vertex; ellipse: centre and dimensions; circle: centre and radius; hyperbola: centre, dimensions, asymptotes). Draw a diagram.

$$4y^2 + 80y + 384 = -x^2 \tag{2}$$

$$16x(x+1) + 8y(2y+3) = 131 \tag{3}$$

$$x^2 - y^2 + 4x + 6y = 6 \tag{4}$$

4. Solve the following word problems.

a. What rate of inflation doubles prices every 14 years? Use the formula for compound interest:

$$A = P\left(1 + \frac{r}{m}\right)^{mt} \tag{56}$$

A	...	accumulated amount at the end of t years
P	...	principal
r	...	interest rate p.a.
m	...	number of conversion periods per year
t	...	term (number of years)

b. Here is Newton's Law of Cooling:

$$u(t) = T + (u_0 - T)e^{kt} \tag{57}$$

The hotel Bora-Bora is having a pig roast. At noon, the chef put the pig in a large earthen oven. The pig's original temperature was $75°F$. At 2:00PM the chef checked the pig's temperature and was upset because it had reached only $100°F$. If the oven's temperature remains a constant $325°F$, at what time may the hotel serve its guests, assuming that pork is done when it reaches $175°F$?
